

AI Virtual Survey™

Enabling underwriters to perform comprehensive property reviews

Automated property loss control technology

Overview

AI Virtual Survey™ within CoreLogic® Underwriting Center™ scans aerial images of properties to assess hazardous conditions, Insurance-to-Value (ITV) factors, and geospatial risks.

In combination with CoreLogic's real estate imagery database, AI Virtual Survey's aerial scanning capabilities give underwriters comprehensive property exterior and interior risk profiles.

With this full set of data and intelligence, underwriters can make the best policy decisions for every property without onsite visits.

Benefits of AI Virtual Survey

- **Automation.** AI models quickly scan the aerial imagery of a property, auto-detecting and highlighting important risk attributes and hazards.
- **Improved Efficiency.** Reduce the time required to determine structural features while also eliminating the need for costly, onsite investigators.
- **Consistent Underwriting Decisions.** Ensure consistency among underwriting teams by removing human error and variable assessments.

Highlights

- Enables straight-through underwriting processes.
- Built upon AI models that autodetect roof condition, pools, yard debris, tree overhang, and much more.
- Automatic population of condition risk data into CoreLogic's underwriting workflow platform.
- Create customizable confidence scores for every hazard or risk condition.
- Provides a quick condition and quality assessment of a home's interior and exterior.
